

# Performance testing

Hien HOANG

# Hello!

## I am Hien HOANG

I am here because I love  
performance testing.

# 1

## Why performance testing

# NETFLIX

Chaos Kong exercise in progress

## September 20th, 2015

“

“If an e-commerce site is making \$100,000 per day, 1-second page delay could cost \$2.5 million in lost sales a year ”

“

“Front-end performance”

“

“Back-end performance”

# Performance criteria

- ✓ Response time: absolute response time, perceived response time, server processing time, rendering time, network latency
- ✓ Throughput
- ✓ Utilization
- ✓ Scalability: horizontal scalability vs vertical scalability

# Testing type

- ✓ Load Tests
- ✓ Peak Load Tests
- ✓ Stress Tests
- ✓ Endurance Tests
- ✓ Scalability Tests
- ✓ Spike Tests
- ✓ Scalability Tests

# STRATEGY

- Performance requirements : SLA
- Performance goals
- Performance test suite
- Performance reporting & analysis
- Performance tuning

# Demo: Digital Toys

## Performance goals

	Min time	Avg. time	Max time
<b>Web</b>	2s	4s	6s
<b>Use-cases</b>	60s	90s	120s

Resource	Utilization
<b>CPU</b>	60
<b>Memory</b>	50
<b>Network</b>	10

# Performance requirements

## Landing page

1. Home page
2. Browse product

## User registration

1. Home Page
2. Sign Up
3. Submit form
4. Logout

## Ordering

1. Home page
2. Login
3. Product catalog
4. Details
5. Add to cart
6. Check out
7. Fill ship address
8. Credit card
9. Place order
10. Order history
11. Sign out

# Performance requirements(con.)

## Order 2nd. time

1. Home page
2. Login page
3. Product catalog
4. Details
5. Add to cart
6. Checkout
7. Place order
8. Order history
9. Log out

## Edit shipping address

1. Home Page
2. Login page
3. Product catalog
4. Shipping address
5. Logout

## Edit payment info

1. Home page
2. Login
3. Product catalog
4. Add credit details
5. Sign out

# Performance requirements(con.)

## Using the continue shopping option

1. Home page
2. Login page
3. Product catalog
4. Details
5. Add to cart
6. Continue shopping
7. Checkout
8. Billing address
9. Credit card details
10. Place order
11. Order history
12. Sign out

Error rate: <0,1%

# Test Environment

Time-consuming for setup new hardware & have no budget  
=> Repurpose existing functional testing infrastructure.

# Test data preparation

Use production data

Obfuscate critical &  
personal identifying  
data

Test data

# User Load Pattern

Variable	Result
The count of users who are logged in at one point in time.	100,000
User-case and percentage of users(Workload)	Browsing catalog: 10% Ordering first time: 60% Ordering second time: 10% Changing address: 5% Changing payment info: 5% Continue shopping: 10%
Load duration	1 -> 2 hours

Thanks!  
Any questions?
